

Chapter 5 Review Questions 1-20

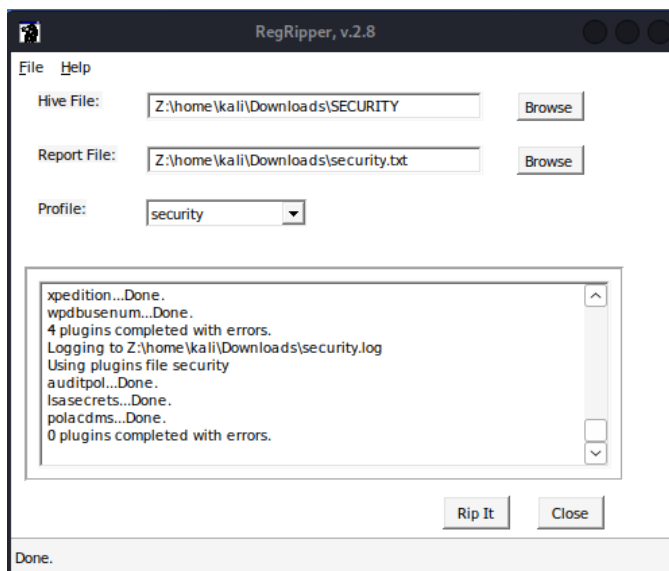

1. b. 512
2. Cylinder, Head, Sector
3. True
4. c. Number of bits per square inch of a disk platter
5. 2
6. b. 2 or more
7. Cluster chain information (linked list of cluster numbers), End-of-file markers (a special value indicating the last cluster of a file), and Bad cluster markers (flags identifying clusters that are damaged and unusable).
8. Ntuser.dat contains the user-specific portion of the Windows Registry. It stores personal settings such as desktop preferences, application settings, mapped drives, and other user-specific configurations.
9. 246 sectors | Each sector = 512 bytes. $123 \text{ KB} = 123 * 1024 = 125,952 \text{ bytes}$.
Dividing: $125,952 / 512 = 246 \text{ sectors}$.
10. b. Unallocated space
11. Journaling (transaction logging) and File-level security/permissions
12. Master file table
13. True
14. 0 bytes (none)
15. A virtual cluster number (VCN) is a logical offset used by NTFS to describe a cluster's position within a specific file, starting from 0.
16. EFI (Extensible firmware interface), was developed to replace the aging BIOS system.
17. Device drivers contain instructions that allow the OS to communicate with hardware devices.
18. b. Ntuser.dat
19. c. Virtual machines are limited to the host computer's peripheral configurations
20. True

Analyzing Registry Files/Hives
